EG DIVIDE

The distribution bus is an element enabling the supply of LPG/CNG to single-installation EG2000 injectors, with 6 mm diameter inlet stubs, mounted directly near the nozzles in the intake manifold.

EG DIVIDE is available in three versions to connect 2, 3 or 4 single injectors. The gas inlet has a diameter of 12 mm. The gas outlets have a diameter of 6 mm. Removable plastic cap with M12x1 thread at the end of the manifold allows for pressure compensation by installing a suitable connector. The strip has two handles for easy mounting in the engine compartment.

The distributor is made of high quality composite material with high resistance to mechanical damage and temperature changes (approved in the operating temperature range from -40 to 120 degrees Celsius).

SIZE: 32 x 140 x 27mm

TECHNICAL DATA

- Versions of the execution: 2, 3, 4 (cyl).
- Operating temperature from -40°C to +120°C.
- Input connector: \varnothing 12 mm.
- Output nozzles: \varnothing 6 mm.
- Approval: E20 110R-01 0055, E20 67R-01 1034
