

EG FUEL LEVEL ^{RESETTER}

The EG FLR v2.6 fuel level indicator emulator is designed for a wide range of cars with a resistive gasoline level sensor with one signal wire and a gas supply system in which the petrol level indication drops when driving on gas and does not reset automatically after restarting the engine.

The emulator sets the actual value of the petrol level in the tank after restarting the engine (emulation of refueling the vehicle).

SIZE: 18 x 73 x 8mm

TECHNICAL DATA

- Working temperature: from -40 ° C to + 120 ° C.
- Product dedicated to cars with LPG installation.
- Tank level update.
-
