

## EG MAGIC POWER

The EG Magic Power reducer is designed for high-performance engines. The evaporator has a single gas outlet for a 12mm hose and supports an output of up to 250HP.

However, an additional outlet nipple can be added, allowing the evaporator to support a maximum output of 450HP.

Its compact size ensures easy installation in various vehicles while maintaining high efficiency and reliability.

The EG Magic Power reducer features improved gas flow and an optimized temperature management system, resulting in better control over gas pressure and increased component longevity. It is ideal for installation in cars and vans with powerful engines.

**SIZE:** 155x115mm

## TECHNICAL DATA

- For engines with power up to 450 HP
- Easy to install, can be mounted in any position in the vehicle
- Adjustable pressure range: 0.8 – 1.6 bar
- Adjustable coolant outlet
- Gas inlet: 8mm copper pipes (M12x1 threaded inlet)
- Use of centrifugal effect to separate the liquid phase of LPG
- Increased heat exchanger surface due to optimized design
- Inlet pressure compensation
- Integrated safety valve • NTC 4.7 kΩ sensor
- Two-piece bracket for easy mounting
- Approval: E8 67R02/02 11748 03
