

EG BASICO 32.6

The smallest ECU from the family of EG controllers. Compressed size of ECU allows to put it in small housing with one 32-pin automotive connector type Molex. Advanced LPG injection control algorithms connected with simple configuration mode guarantee a stable operating and maintenance free whole LPG system, which gives you savings of time and fuel. EG BASICO32.6 is characterized by maximum simplification of installation process. No need for connecting the Ignition key wire and the RPM wire. Auto Adaptation function ensures that the engine will get optimum dose of LPG. Extra petrol injection function while working on LPG protects engine when it works under heavy load. Controller software allows communication by Bluetooth and WiFi between controller and computer or other mobile device with EG Movi application installed.

Technical Specification

- No need for connecting the RPM wire.
- No need for connecting the Ignition key wire.
- Extra petrol injection function while working on LPG.
- Gas injection sequence advancement.
- Changeover time shown on LEDs of fuel switch.
- The possibility of testing the system actuators from the software.
- Customizable function of holding the button (setting fuel level indication LEDs).
- Cold VAG function.
- Automated tuning by pressing the switch button without need of establishing connection with the PC.
- Number of possible LAMBDA connectable: 2.
- Bluetooth and WiFi connections support.
- Naturally aspirated and supercharged engines (except Valvetronik type engine).
- Automatic adaptation of multiplier.
- Calibration assistant.
- Sound signaling when system errors occurred.
- Continuous maps collection.
- Automatic software updates.
- Reminding of installation service inspection.
- External dimensions: 120 x 99 x 36 mm.
- Automotive connector MOLEX 32 PIN.
- Composite Housing.
